

AI-Based Smart Study Planner

1. Problem Statement

Many students struggle to manage their study time effectively and often fail to create a balanced study schedule. This leads to poor time management, incomplete syllabus coverage, and exam stress. An AI-Based Smart Study Planner is designed to generate personalized study plans based on subjects, available time, and exam dates.

2. Objective

- Help students organize study schedules efficiently.
- Improve time management and productivity.
- Provide personalized study recommendations using AI.
- Track learning progress and support academic goals.

3. Key Features

- User Registration and Login
- AI-Based Study Schedule Generation
- Subject Priority Management
- Daily and Weekly Study Plans
- Progress Tracking Dashboard
- Exam and Assignment Reminders
- Performance Analysis and Suggestions
- User-Friendly Interface

4. Architecture

Student → User Interface → AI Planner/Recommendation Engine → Database

5. Tools

Google Colab, VS Code, GitHub, Figma, MySQL Workbench

6. Technologies

Python, Machine Learning (AI), Streamlit, MySQL/SQLite, HTML, CSS

7. Conclusion

The AI-Based Smart Study Planner helps students manage study time effectively through personalized schedules, progress tracking, and intelligent recommendations.

8. Additional Information

Advantages:

- Saves time in planning studies
- Improves learning efficiency

- Easy to use
- Personalized recommendations
- Reduces exam pressure

Future Enhancements:

- Voice Assistant Integration
- Mobile Application Development
- AI Chatbot for Doubt Solving
- Cloud-Based Storage
- Integration with Online Learning Platforms

Hardware Requirements: Laptop/PC or Smartphone, Internet Connection

Software Requirements: Python 3.x, Streamlit, MySQL/SQLite, VS Code or Google Colab

Project Type: Software-Based AI Project

Domain: AI + Education Technology (EdTech)
